

REAL-TIME HYBRID MODEL TESTING IN MARINE TECHNOLOGY - RECENT ACTIVITIES AT SINTEF OCEAN AND NTNU

Thomas Sauder, PhD, Senior Researcher, SINTEF Ocean

HYSIM2019 workshop, 13.03.2018

Contents

1. **NTNU and SINTEF Ocean**
2. Applications of real-time hybrid testing in marine technology
3. Our methods, our challenges

The Marine Technology Centre in Trondheim

University

Research Institute (private, non-for-profit)

Contents

1. NTNU and SINTEF Ocean
- 2. Applications of real-time hybrid testing in marine technology**
3. Our methods, our challenges

Marine Technology VS Earthquake engineering

- Rate dependant phenomena (e.g. wave radiation damping) → real-time is a must
 - Use of *Froude-scaling* for wave-related phenomena
- Hybrid testing should be performed in *Froude scaled*-real-time (~5x-10x faster than r.t.)
- "Ill-conditioned problems" in space and time
 - Load control
 - Characteristic loads in N , not kN
 - Systems' natural periods are in general much larger than in earthquake engineering

Contents

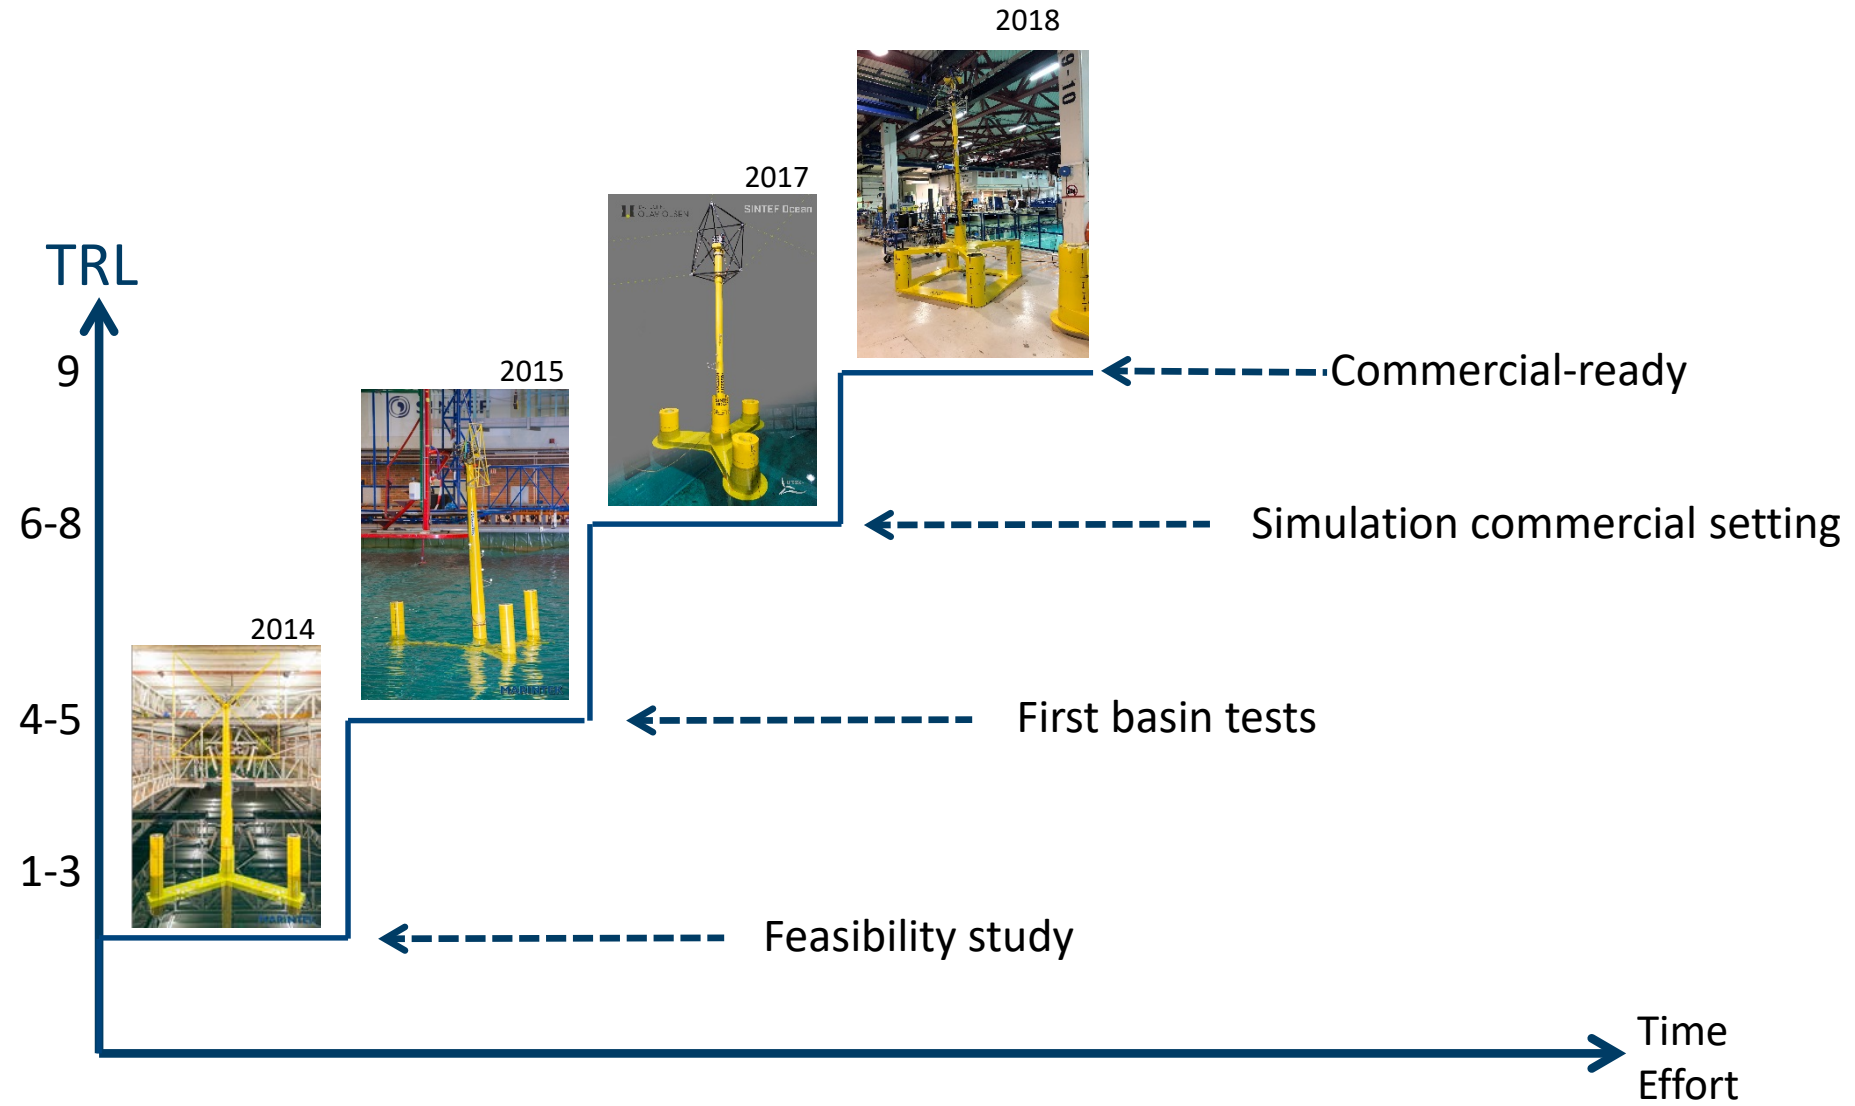

1. NTNU and SINTEF Ocean
2. Applications of real-time hybrid testing in marine technology
 1. **Offshore wind turbines**
 2. Active truncation of slender marine structures
 3. Model identification
3. Our methods, our challenges

Ocean basin
@SINTEF Ocean

Aero simulation
(NREL's "FAST" code)

Contents

1. NTNU and SINTEF Ocean
2. Applications of real-time hybrid testing in marine technology
 1. Offshore wind turbines
 2. **Active truncation of slender marine structures → see session F**
 3. Model identification
3. Our methods, our challenges
